II. CLAIM AMENDMENTS

1.   (Original) A system for providing personalized services for mobile users, the system comprising

- a plurality of mobile terminals, each mobile terminal being provided with means for acquiring personal content and adapted to be in wireless communication with a telecommunications system,

-    storage means in the mobile terminal, the storage means being adapted to store at least a first part of the personal content acquired,

-    at least one remote data repository connected to the telecommunications system for storing at least a second part of the personal content acquired by the plurality of mobile terminals, whereby at least one of the repositories is assigned for the use of each mobile terminal,

- means adapted to transfer a selected part of the personal content between the storage means and the at least one remote data repository through said telecommunications system, the means including predetermined criteria the fulfillment of which initiates said transfer,

- means for extracting data from said at least a first part of the personal content,

-    association means for associating said extracted data with said at least a second part of the personal content, and

-service provision means responsive to said association means, the service provision means being adapted to generate and/or provide a personalized service using

said extracted data associated with said at least a second part of the personal content.

2.   (Original) A system according to claim 1, the system further comprising

-    selection means for selecting data to be retrieved from an external data storage, the selection being made at least partially on the basis of said extracted data,

-    means for receiving said selected data, and

-    association means adapted to associate said received data with the personal content stored in the data repository,

-    wherein the service provision means are adapted to utilize said received data for generating and/or providing said personal service.

3.   (Original) A system according to claim 1, the system further comprising

-    communication means adapted to retrieve at least one stored object and/or item of data extracted from the remote data repository and

-    a server including application software adapted to perform an action as a result of which information is generated, the action to utilize the retrieved object and/or said data extracted.

4.   (currently amended) A system according to ~~claim 1~~ claim 3, the system further comprising means for storing said extracted information in said remote data repository.

5.　(Currently Amended) A system according to claim 1, the system further comprising means for generating charging information on the basis of ~~the~~ _an_ action performed.

6.　(Original) A system according to claim 3, the system further comprising

- means to subscribe to a service by sending a request to a server,

- means to process said request on said server, and

- means responsive to said processing adapted to allow access of the application software to an object and/or stored information in the remote data repository.

7.　(Original) A system according to claim 3, the system further comprising

- means to subscribe to a service by sending a request to a server,

- means to process said request, and

- means responsive to said processing adapted to send an object and/or extracted information in the remote data repository to the server in order to enable provision of the service requested.

8.　(previously presented) A system according to claim 6, wherein the service requested is identified in the request.

9.   (previously presented) A system according to claim 6, wherein an object and/or extracted information is identified in the request, the object and/or extracted information defining the action to be performed by the server.

10.   (Original) A system according to claim 2, wherein

-   said service includes a personal magazine in a paper and/or digital format and said received data comprising at least one item of the following data: i) calendar information, ii) image/video information, or iii) location information of the user and

-   said selected data received from the external data storage includes information to be laid out in a personal magazine.

11.   (currently amended) A system according to claim 10, wherein the selection means are adapted to use at least date information extracted from said personal content in order to select objects and/or extracted data from the a time interval to be laid out in the personal magazine.

12.   (previously presented) A system according to claim 4, wherein said means for extracting data from said personal content include at least means to perform i) optical character/text recognition or ii) pattern recognition.

13.   (Original) A method for providing personalized services for mobile users, the method comprising the steps of:

-   acquiring personal content in a mobile terminal,

- storing at least a first part of said personal content in the mobile terminal,

- transferring through a telecommunications system selected at least a second part of the personal content between the mobile terminal and at least one remote data repository, the transfer being initiated when predetermined criteria are fulfilled,

- storing the transferred personal content in the at least one remote data repository,

- assigning at least one of said remote data repositories for the use of the mobile terminal, and providing the at least one remote data repository with means for accessing the personal content stored in the mobile terminal,

- extracting data from said at least a first part of the personal content,

- associating said extracted data with said at least a second part of the personal content,

- in response to said associating step, generating a personalized service using said extracted data associated with said at least a second part of the personal content, and

- providing the personalized service to the user.

14.   (Original) A method according to claim 13, the method further comprising the step of:

- selecting data to be retrieved from an external data storage, the selection to be made at least partially on the basis of said extracted data,

- receiving said selected data,

- associating said received data with the personal content stored in the data repository, and

- providing a service, the service to utilize said received data.

15. (Original) A method according to claim 13, the method further comprising the steps of:

-retrieving at least one stored object and/or item of data extracted from the remote data repository and

-performing an action as a result of which information is generated, the action to utilize the retrieved object and/or said data extracted.

16. (currently amended) A method according to ~~claim 13~~ claim 15, the method further comprising the step of storing said extracted information in said remote data repository.

17. (currently amendedl) A method according to claim 13, the method further comprising the step of generating charging information on the basis of ~~the~~ an action performed.

18. (currently amended) A method according to claim 15, the method further comprising the steps of:

- subscribing to a service by sending a request to a server,

-   processing said request, and

-   in response to said processing, allowing ~~access of the~~ application software to access an object and/or stored information in the remote data repository.

19.   (Original) A method according to claim 15, the method further comprising the steps of:

-   subscribing to a service by sending a request to a server,

-   processing said request, and

-   in response to said processing, sending an object and/or extracted information to the service to provide the service requested.

20.   (previously presented) A method according to claim 18, wherein the service requested is identified in the request.

21.   (previously presented) A method according to claim 18, wherein an object and/or extracted information is identified in the request, the object and/or extracted information defining the action to be performed by the server.

22.   (Original) A method according to claim 14, wherein

-   said service includes a personal magazine in paper and/or digital format, said received data to comprise at least one item of the following data: i) calendar information, ii) image/video information, or iii) location information of the user and

- said selected data retrieved from an external data storage includes information to be laid out in the personal magazine.

23.   (currently amended) A method according to claim 22, wherein in the selection step at least date information extracted from said personal content is used in selecting objects and/or extracted data from ~~the~~ a time interval to be laid out in the personal magazine.

24.   (previously presented) A method according to claim 16, wherein said extracting of data from said personal content includes at least performing i) optical character/text recognition or ii) pattern recognition.
